

HTI Sports collaborates with Ghent University as it further develops its first-to-market turnkey MRI solution for Elite Sports Teams

HTI Sports is excited to announce a collaboration agreement with Ghent University and its sports innovation team 'Victoris' as it continues to build out its first-to-market turnkey MRI solution for elite sports organizations and prepares for full commercial launch. HTI Sports is partnering with leading international research institutions and developers of innovative technology to provide their Elite Sports partners with the best MRI image, soft tissue and sports science research and analytics available in the world.

The collaboration with Ghent University and the team of Prof. Wim Derave will enable HTI Sports' customers the ability to conduct a 'Muscle Talent Scan' of their entire roster of athletes in order to personalize their training and injury and rehabilitation management as well as generate insights that can assist with squad selection.

Ghent University-Victoris is a leading global research institution consisting of a consortium of experts in the field of sports technology and innovation. It is one of only 24 Ghent-based business centers supported by the Flemish Industrial Research Fund.

Paul Rushton, UK Director of HTI Sports said, *"The Muscle Talent Scan offered by Prof. Wim Derave and his team will be vital in assisting Elite Club sports scientists and medical teams assess the muscle typology of their athletes. Their long-standing, successful track record of working closely with English Premier League teams proves their credibility and value in the Elite Sports world and in this aspect of innovative analytics."*

Wim Derave of Ghent University-Victoris commented, *"We are thrilled to join forces with HTI Sports and to provide MRI-based scientific innovations to elite sports. We share an ambition to pioneer in this next generation of professional athlete support"*

HTI Sports is part of the HTI family of companies. HTI is a unique and dynamic business model established in the US more than 40 years ago in response to the growing worldwide demand for a patient-focused model of cancer treatment, under which care is delivered as close to the patient's home as possible. Our highly focused mission has been to develop comprehensive centers of excellence through public/private initiatives and in partnership with high quality healthcare providers that advance the diagnosis and treatment of cancer. HTI has delivered over 250 cancer centers, all of which include a full range of diagnostic equipment. HTI is a sister company of Proton International, which provides turnkey development for state-of-the-art Proton Beam Therapy across the globe.
